About LaTeX

A daunting question faced by the authors of research articles, reports, books and other publications is: What is the most flexible, portable and efficient approach for typesetting the documents, reports and books? Can the content be separated from formatting and structuring **LATEX pronounced «Lah-tech»** is a document preparation system for high-quality type setting. It is most often used for medium-to-large technical and scientific documents but it can be used for almost any form of publishing. LATEX is not a word processor! Instead, LATEX separates content from formatting and facilitates portability of documents. LATEX is a document preparation system and document mark-up language. It uses the TeX typesetting program for formatting its output. LATEX is based on the philosophy that authors should be able to focus on the content of what they are writing without being distracted by its visual presentation. It has superior support for mathematical equations, graphics, bibliography and handling of references over the traditional word processors. Despite of these merits of LATEX, it is sparsely used in academia.
